

Leiblein

world of liquids

Technologies for solid/liquid separation

Dear Readers

The Leiblein GmbH is an owner-managed family business based in Hardheim connecting successful entrepreneurship with social, societal and environmentally friendly commitment since its founding by Otto Leiblein in 1953.

Over the last decades we have become an expert in the solid/liquid separation and can rely on a high level of expertise and valuable experience in the treatment of various liquids. With our core competencies process water treatment and cooling lubricant treatment, we make an important contribution in protecting our environment, in particular the existential and increasingly scarce water resources.

In order to provide you the best and most sustainable technology solutions for optimizing your processes, we are constantly working on enhancing our products. We attach great importance to the quality of our services, especially including customer-specific plants, besides our standard products.

We advice personally and competently in order to develop together with you the most ideal and economical solution for your request.

We look forward to your inquiry.

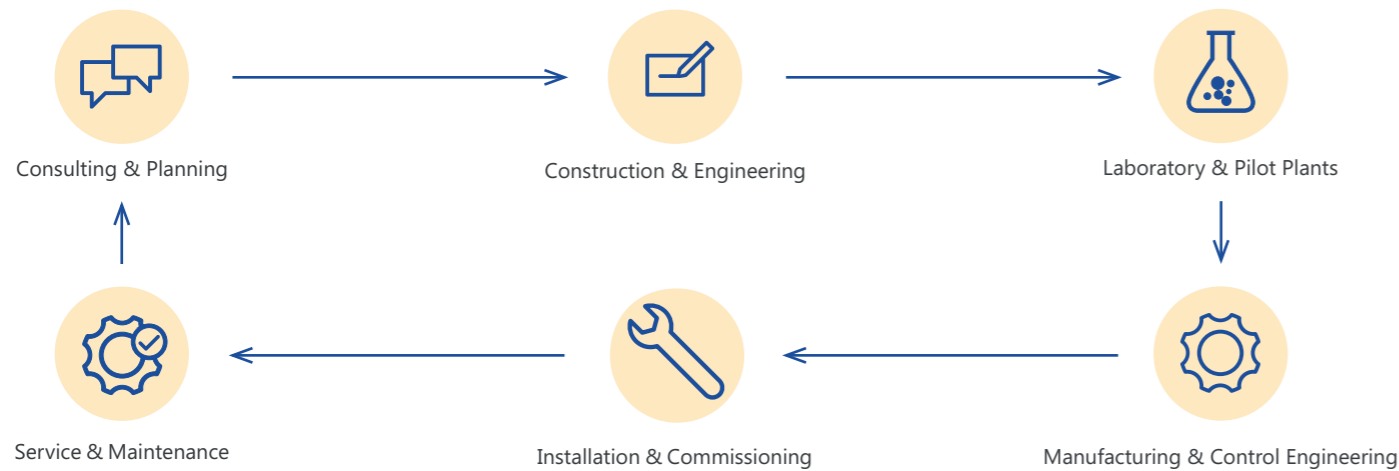

Alex Leiblein

Everything from a single source

Our range of services

Our Mission

Technologies for solid/liquid separation

Our mission is to sustainably improve the industrial processes of our customers by means of efficient technologies for solid/liquid separation – to increase profitability and to protect our environment.

Our Certificates

To ensure quality and safety

- Quality Management System according to DIN EN ISO 9001
- Management System according to OHSAS 18001
- Specialist company according to WHG
- Awarded for "Distinguished Support of Trainees" by our chamber of commerce

Technology for the treatment of water, waste water and cooling lubricants

From individual components to complete turnkey plants

Process Water

The water used in industrial processes (rarely also other liquids) is cleaned and maintained so that it can be recirculated. Depending on the case of application and type of process, various types of process water are treated to the required quality by using Leiblein products.

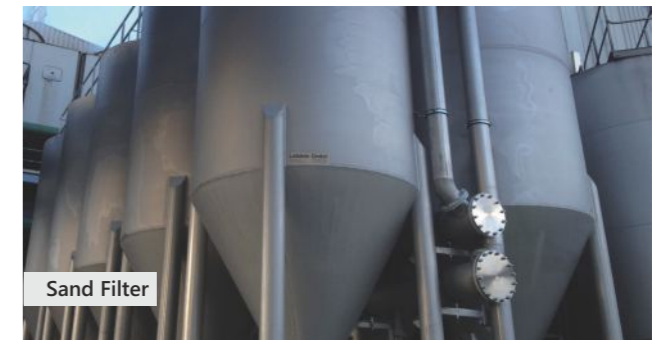

Coolant Technology

Cooling lubricants are used in the cutting and non-cutting processing of metals and other materials. To obtain the longest possible service life of coolants, tramp oils, fine metal chips and grinding wheels grit that have been mixed with this coolants during the manufacturing process, are separated by Leiblein products.

With innovative and combinable components, we can refer on tried and tested and extremely flexible solutions for the purification and treatment of water, waste water and cooling lubricants.

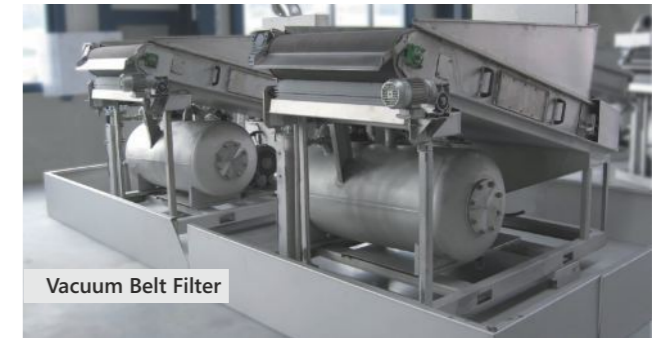

Lamella Separator

Sand Filter

Inclined Filter

Vacuum Belt Filter

Central Coolant Filtration Plant

Benefit from our strengths

Your advantages

- Extensive experience in processing technology
- Expert knowledge and expertise
- High degree of flexibility, since all services are performed in-house
- Comprehensive rental stock of components and plants for solid/liquid separation
- Designated contact person beyond the project duration

This means for you:

High-quality, specific and fast solutions for your requirements

Recycling Industry Food Processing Industrie Landfill Metal Processing
Industry Tunneling Chemical Industry Keramik Industry Gravel and
Sand Industry Stone Industry Street-cleaning Glass Industry Construction Sites
Energy Industry Steel Industry Waste Industry

Process Water Filtration Sludge Dewatering Well Water Cooling Water
